PCR was performed on DNA from transformants of Arabidopsis thaliana
plants from INRA (Versailles). The DNA fragment(s) resulting from
the PCR were directly sequenced from the left or the right border
to determine the genomic sequence flanking the insertion. T-DNA
derived sequences were removed. Information to order the
corresponding mutant line and a link to a database providing a
graphical display of the insertion site are available at
http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
been generated in the framework of the French plant genomics
program 'Genoplante' (http://www.genoplante.com and
http://genoplante-incolifobiogen.fr).

                                                                                                                                                                                                                                                               ö
             This oligonucleotide can hybridise to nucleic acids encoding phospholipase A2 typical of the synovial fluid of patients with rheumatoid arthritis. (SF-FLA2 is more closely related to group II PLA2 enzymes such as those in rattlesnake venom than to pancreatic PLA2). The oligonucleotide (especially its phosphorothioate analogue) would be useful in inhibiting SF-PLA2 expression. SF-PLA2 secretion has been detected from a human epidermal carcinoma cell line and primary human epidermal keratinocytes. This suggests that the inhibitory oligonucleotide would be useful in the treatment of inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequences given in AAQ61917-55 are oligonucleotides which contain a G4 stretch and which may be used for inhibiting phospholipase A2 enzyme estivity. Oligonucleotides such as these may also be used for inhibiting activity of HSV, HIV, human cytomegalovirus or influenza virus, or for treating inflammatory and neurological disorders caused by phospholipase A2 activity in cases of hyperproliferation, malignancy, cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          * modified oligo-nucleotide contg guanine quartet - inhibits activity
viruses, e.g. HIV, and phospholipase A2 and modulates telomere length
chromosomes.

                                                                                                                                                                                                                  in the isolation of a 200p frames containing the phospholipase A2 (PLA2) promoter sequence. This promoter sequence was used to replace the human beta-globin promoter which had been used to express the human growth hormone (HGH) gene in expression vector pBC3. The vector further comprised a promoter and a dominant control region. This vector was used in an expression system comprising a mammalian cell transformed with the vector. This expression system could be used to prepare pharmacologically useful polypeptides eg. HGH, granulocyte-colony stimulating factor (G-CSF) and PLA2, and for gene therapy. The mammalian host comprises erythroid cells and a heterologous promoter
                                                                                                                                 Expression vectors for use in mammalian cells - contain dominant control region derived from beta-globin gene.
                                                                                                                                                                                                      primer sequences given in AAQ26373-4 are PCR primers which were used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 JUNCULE TYPE: other nucleic acid
DESCRIPTION: third strand derived from c-myc
DESCRIPTION: sequence region in Seq ID No. 58612443
POTHETICAL: Yes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GENERAL INFORMATION:
APPLICANT: WANG, C. -G.
APPLICANT: WANG, C. -G.
APPLICANT: HERBURN,
TITLE OF INVENTION: GENETIC SEQUENCE ASSAY USING DNA
TITLE OF INVENTION: TRIPLE-STRAND FORMATION.
NUMBER OP SEQUENCES: 365

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 9, Application US/09798542

Patent No. 6685948

GENERAL INPORMATION:
APPLICANT: Markoff, Lewis
TITLE OF INVENTION: REPLICATION-DEFECTIVE DENGUE VIRUSES
TITLE OF INVENTION: THAT ARE REPLICATION-DEFECTIVE IN MOSQUITOES FOR USE AS
TITLE OF INVENTION: THAT ARE REPLICATION-DEFECTIVE IN MOSQUITOES FOR USE AS
TITLE OF INVENTION: THAT ARE REPLICATION-DEFECTIVE IN MOSQUITOES FOR USE AS
TITLE OF INVENTION: THAT ARE REPLICATION NUMBER: US/09/798,542
CURRENT APPLICATION NUMBER: DS/02-05
PRIOR PELLING DATE: 1999-02-05
PRIOR APPLICATION NUMBER: US 60/098,981
PRIOR PILING DATE: 1998-09-02
PRIOR PELLING DATE: 1998-09-02
SOFTWARE: PSECEN FOR Windows Version 4.0
SOFTWARE: PSECEN FOR Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Sequence 357, Application US/08319492B

Patent No. 5616488

GENERAL INFORMATION:

APPLICANT: Sullivan, Sean M.
APPLICANT: Standsomb, Dan T.

TITLE OF INVENTION: RECONDITIONS RELATED TO LEVELS

TITLE OF INVENTION: OF LI-5

NUMBER OF SEQUENCES: 751

CORRESPONDENCE ADDRESS:
ADDRESSEE: Suite 4700

CITY: Los Angeles
STREE: California
COUMPRY: U.S.A.

ZIP: 20071
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 358, Application US/08319492B
Patent No. 5616488
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Sullivan, Sean M.
APPLICANT: Bullivan, Kenneth G.
APPLICANT: Stinchcomb, Dan T.
TITLE OF INVENTION: RIBOZYME TREATMENT OF DISEASES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMPUTER: 18H Compatible

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 132 Application US/09313221A

Sequence 132 Application US/09313221A

Patent No. 6468743

APPLICANT: Thomas L. Romick (Inventor)

APPLICANT: Thomas L. Romick (Inventor)

APPLICANT: Mark S. Fraser (Inventor)

TITLE OF INVENTION: PCR TECHNIQUES FOR DETECTING MICROBIAL

TITLE OF INVENTION: AND VIRAL CONTAMINANTS IN FOODSTUFFS

FILE REFERENCE: HUNT-042704

CURRENT APPLICATION NUMBER: US/09/313,221A

CURRENT FILING DATE: 1999-05-17

PRIOR PILING DATE: 1999-05-18

NUMBER OF SEQ ID NOS: 145

SOFTWARE: PSESEE FOR Windows Version 4.0

SEQ ID NO 132

LENGTH: 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ch 13.0%; Score 10; DB 1; Length 10; 1 Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1769, Application US/09401063

Patent No. 6623962

GENERAL INCRNATION:
GENERAL INCRNATION:
APPLICANT: RAHLARY Saghir
APPLICANT: RAMARINE SAGHIR
APPLICANT: RASWAGEN, James
TITLE OF INVENTION: OF DISEASES OR CONDITIONS RELATED
TITLE OF INVENTION: TO LEVELS OF EPIDERMAL GROWTH
TITLE OF INVENTION: TO LEVELS OF EPIDERMAL GROWTH
TITLE OF INVENTION: PACTOR RECEPTORS
NUMBER OF SEQUENCES: 1877
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
STREET: 63164 4700
CITY: LOS Angeles

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 415, Application US/09940244

Patent No. 6692917

GENERAL INPORMATION:
APPLICANT: Hall, Jeff G.
APPLICANT: Hall, Jeff G.
APPLICANT: Application Dendrimers
FILE REFERENCE: FORS-06478

CURRENT APPLICANT: RORS-06478

CURRENT PAPLICANTON NUMBER: US/09/940,244

CURRENT PILING DATE: 2002-05-06

NUMBER OF SEQ ID NOS: 422

SOFTWARE: PatentIn version 3.1

LENGTH: 12
OPERATING SYSTEM: MS-DOS version 6.2
SOFTWARE: Wordperfect Version 5.1
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/173,489C
FILING DATE: 22 DEC 1993
CLASSIFICATION: 435
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US 07/968,436
FILING DATE: 29 OCT 1992
ATTONEV/AGENT INFORMATION:
NAME: HANGHIMAN, JOSEPH H.
REGISTRATION NUMBER: 26,179
REFERENCE/DOCKET NUMBER: U9518-6
TELECOMMUNICATION INFORMATION:
TELEFAN: (attorney) (212) 708-1880
TELEFAN: (attorney) (212) 246-8959
INFORMATION FOR SEQ ID NO: 331:
SEQUENCE CHARACTERISTICS:
LENGTH: 11 base pairs
TEMPER HUGGE acid
STRANDEDNESS: double stranded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Mismatches

Fatent No. 6307040

GENERAL INFORMATION:

APPLICANT: Cook, Phillip Dan

APPLICANT: Advasaki, Andrew M

TITLE OF INVENTION: Modilate Gene Expression

FILE OF INVENTION: Modilate Gene Expression

FILE REFERENCE: 16182708

CURRENT APPLICATION NUMBER: US/08/936,166A

CURRENT APPLICATION NUMBER: 07/835,932

EARLIER PILING DATE: 1992-03-05

NUMBER OF SEQ ID NOS: 12

SOFTWARE PLANCE: Patentin Ver. 2.1

SEQ ID NO 6

LENGTH: 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PEATURE: OTHER INFORMATION: Description of Artificial Sequence: nucleoside OTHER INFORMATION: having a modified sugar moiety
